

BABEDINO Whitepaper

Lovely Baby Dino Meme Token

Version 2.0 | Updated 25 October 2026

Executive Summary

BABEDINO is a community-oriented BEP-20 meme token on BNB Smart Chain. The project combines dinosaur-themed creative content with public on-chain records, an active community airdrop and transparent token and liquidity-lock disclosures. This whitepaper describes the project's current verified structure rather than presenting unimplemented features as completed products.

The fixed total supply is 1,000,000,000 BABEDINO. As of 25 October 2026, 400,000,000 BABEDINO is held in published PinkSale plain-token locks. The remaining 600,000,000 BABEDINO is classified as the unlocked circulation and ecosystem allocation, which includes holder balances, decentralized-exchange liquidity, community distribution, airdrop activity and project operations.

Current Position

Metric	Verified position
Total supply	**1,000,000,000 BABEDINO**
Plain tokens locked	**400,000,000 BABEDINO | 40%**
Unlocked circulation and ecosystem allocation	**600,000,000 BABEDINO | 60%**
Wallet-owned active LP locks	**455,000 Cake-LP**
PinkSale-listed LP total	**495,000 Cake-LP**
Contract ownership	**Renounced**
Transfer tax	**0% buy | 0% sell**

Important. Plain-token amounts and Cake-LP amounts are different measurements and must not be added together. Cake-LP tokens represent proportional ownership positions in the BABEDINO/USDT PancakeSwap V2 pool.

Project Identity and Mission

Lovely Baby Dino draws on the lasting cultural interest in dinosaurs to create an accessible community identity within the BNB Smart Chain ecosystem. BABEDINO is designed as a meme token supported by open documentation, verifiable contracts and public community channels.

The project's practical focus is community participation, transparent token distribution, decentralized trading access and educational content explaining the token's on-chain status. BABEDINO does not guarantee investment returns, token-price appreciation or delivery of features that have not been publicly launched.

Token Overview

Field	Details
Token name	**Lovely Baby Dino**
Symbol	**BABEDINO**
Network	**BNB Smart Chain**
Standard	**BEP-20**
Decimals	**18**
Total supply	**1,000,000,000 BABEDINO**
Token contract	**0x1CE070f548AC67825e2AAd4368Af9A78ce0C6080**
BABEDINO/USDT LP contract	**0xc85413730c8158C4cca2051d7d6Ed9deDCcD2306**
Primary decentralized market	**PancakeSwap V2**

Supply Classification

The 400,000,000 BABEDINO plain-token lock total equals 40% of the fixed supply. These balances remain subject to the unlock dates published in the project's Lock and Unlock Schedule.

The remaining 600,000,000 BABEDINO equals 60% of total supply and is designated as the unlocked circulation and ecosystem allocation. This figure is a maximum allocation outside the current plain-token locks; it should not be interpreted as proof that every token within the allocation is actively circulating in public markets at the same time.

Token and Liquidity Locks

BABEDINO publishes plain-token and liquidity-provider lock records through PinkSale. Plain-token locks restrict specific BABEDINO balances. Liquidity-provider locks restrict Cake-LP ownership tokens representing positions in the BABEDINO/USDT PancakeSwap V2 pool.

Lock category	Current total	Status
BABEDINO plain-token locks	**400,000,000 BABEDINO**	Seven published records
Wallet-owned active LP locks	**455,000 Cake-LP**	Six active records
Contract-owned expired LP record	**40,000 Cake-LP**	Expired and unwithdrawn
PinkSale-listed LP total	**495,000 Cake-LP**	Seven records in total

The 40,000 Cake-LP record reached its stated unlock time, but PinkSale reports an unlocked amount of zero. Its designated owner is the BABEDINO token contract rather than the project wallet. The underlying BABEDINO and USDT were not automatically transferred to a wallet when the date passed; they remain represented by the Cake-LP position while that LP token remains held by PinkLock. The position is therefore disclosed separately from the active wallet-owned time locks.

Liquidity-provider locks PinkSale BABEDINO/USDT LP records

Detailed schedule BABEDINO Token and Liquidity Lock Schedule

Liquidity and Trading

BABEDINO is available through the BABEDINO/USDT PancakeSwap V2 pool. Market price, pool reserves, trading volume and execution conditions can change continuously. A liquidity lock restricts withdrawal of the referenced LP position, but it does not guarantee price stability, market depth, trading volume or project success.

How to Acquire BABEDINO

1. **Verify the contract.** Use the full BABEDINO contract address shown in this whitepaper and on the official website.
2. **Use a compatible wallet.** Connect a BNB Smart Chain wallet to PancakeSwap using the official PancakeSwap interface.
3. **Select the verified pair.** Import BABEDINO by contract address and review the quoted BABEDINO/USDT route before confirming a swap.
4. **Review transaction details.** Confirm network, token address, price impact and wallet permissions before signing.

Contract Security and Transparency

The BABEDINO source code is verified on BscScan. Administrative ownership has been renounced to the zero address. Current independent automated checks report no active honeypot behavior, no buy or sell tax, no active blacklist, no mintability, no proxy structure and no hidden owner.

Control	Current verified status
Source code	**Verified on BscScan**
Administrative owner	**Renounced to the zero address**
Mint function	**Not available**
Buy and sell tax	**0% / 0%**
Blacklist	**Not active**
Proxy	**No**
Honeypot result	**False**
Whitelist-related code	**Present in source but inactive and not administrable after renouncement**

Automated scanner results are indicators rather than guarantees or formal audits. Some scanners may flag the presence of whitelist-related source-code elements even though the operating period is inactive and the renounced owner cannot administer or re-enable the feature. The project publishes supporting on-chain explanations so readers can review this distinction directly.

Transparency Principles

- **Public contracts.** The token and pair addresses are published in full and linked to BscScan.
- **Public lock records.** Token and LP positions are separated and linked to PinkSale records.
- **No exaggerated guarantees.** Security checks and locks reduce specific risks but do not eliminate market, wallet, smart-contract or counterparty risk.
- **Document updates.** Material changes to supply classification, locks or project operations should be reflected in the official website and GitHub repository.

Community and Current Operations

BABEDINO continues community development through its official website, public documentation, social channels and token-distribution activities. The project's current operational focus is transparency, community participation, maintaining decentralized-market access and keeping public records current.

Official Airdrop

The official BABEDINO airdrop campaign is published through the project website. Participants should use only the official domain, verify the token contract and never disclose a wallet seed phrase or private key. The project does not require users to transfer funds in order to participate in the official free-token campaign.

Airdrop page Official BABEDINO claim page

Development Status

Completed and Active

- **Token deployment.** BABEDINO is deployed and source-verified on BNB Smart Chain.
- **Ownership status.** Administrative ownership is renounced.
- **Decentralized market.** The BABEDINO/USDT PancakeSwap V2 pair is active.
- **Lock disclosures.** Plain-token and Cake-LP records are published through PinkSale and summarized in the project's lock schedule.
- **Community distribution.** The official airdrop campaign is publicly available through the project website.
- **Documentation.** The website and GitHub repository publish security and transparency materials.

Ongoing Priorities

- **Documentation maintenance.** Keep supply, lock and security disclosures aligned with current on-chain records.
- **Organic community growth.** Expand participation through official channels without promising financial returns.
- **Listings and integrations.** Pursue additional services or listings only where technically and financially feasible.
- **Future features.** Any staking, governance, NFT or other utility will be described as active only after it has been implemented and publicly verified.

Governance

BABEDINO does not currently claim a deployed on-chain DAO. Community feedback is gathered through official communication channels. Any future governance system will require separate technical implementation, documentation and public verification before being represented as operational.

Risk Disclosure

BABEDINO is a cryptoasset and meme token. Cryptoassets can experience extreme price volatility, limited liquidity, smart-contract risk, wallet compromise, regulatory change and total loss of value. Token locks do not guarantee market value, project performance or the availability of an exit market. Automated security scanners and public documents do not replace independent technical, legal, tax or financial review.

Nothing in this document constitutes investment, legal, tax or financial advice, an offer of securities, a promise of profit or a guarantee of future development. Users are responsible for verifying contract addresses, evaluating risks and complying with the laws applicable in their jurisdiction.
